

The Seasons of the Year

There are four seasons in a year: spring, summer, fall (also known as autumn), and winter.

Spring is characterized by warmer temperatures, melting snow, and the return of colorful flowers and plants. It is a time of renewal and growth, as the earth emerges from the cold of winter.

Summer is the hottest season of the year, with long, sunny days and high temperatures. It is a time of outdoor activities and vacations, as people take advantage of the warm weather.

Fall, or autumn, is a time of change, as the leaves on the trees turn vibrant shades of red, orange, and yellow before falling to the ground. The temperatures begin to cool, and people start to prepare for the colder months ahead.

Winter is the coldest season of the year, with shorter days and lower temperatures. It is a time of snow and ice, as well as holiday celebrations like Christmas.

Each season brings its own unique beauty and characteristics, and they all play an important role in the natural cycle of the earth. Whether you enjoy the warmth of summer or the snowy landscapes of winter, there is something special about each season of the year.
